Good design doesn't have to be expensive

Our mission is pure and simple. We aim to bring high quality coffee and tea solutions, as well as household accessories, to everyone. We innovate to create great designs at affordable prices in line with our guiding principle of 'form follows functionality', whilst also taking into consideration our environmental responsibility, sustainability and respect for the wellbeing of our staff, our communities and our planet.

Copenhagen (Nyhavn),
Denmark in 1944

The early years

The BODUM® story began in 1944 in Copenhagen, Denmark, when Peter Bodum founded the company. The story continues today with his son, Jørgen Bodum, owning the company along with his sister, Pia Bodum, ensuring that the BODUM® Group remains a 100% family-owned business.

The first assembling of Bodum's vacuum coffee maker was carried out on the 5th floor of Bodum's old warehouse in Copenhagen (Nyhavn), Denmark in 1944.

In BODUM®'s early years, Peter Bodum was importing glassware to Denmark, when he first became aware of vacuum coffee makers. Impressed by the taste of the coffee, he set out to improve the design and make a product that was affordable for everybody, thus laying the foundations for BODUM®'s success. In the early 1950s, he produced MOCCA, BODUM®'s first vacuum coffee maker, before releasing the SANTOS vacuum coffee maker in 1958.

SANTOS was the product that placed BODUM® firmly on the international stage, where it was acclaimed for its unique design and went on to become one of the most important coffee makers worldwide throughout the 1950s, 1960s, and 1970s.

In 1974, 26-year-old Jørgen Bodum took over the BODUM® company, making an immediate impact with the launch of BODUM®'s first French coffee press, the BISTRO, merging BODUM® traditions with fresh innovation. The internationally acclaimed BISTRO was selected as the most environmentally friendly coffee press by the international media, and received a number of prestigious international and Danish design awards.

A few years later, Jørgen Bodum moved BODUM®'s headquarters to Switzerland, ensuring the company was strategically placed in central Europe.

With great design one of BODUM®'s founding principles, it was a natural progression for Jørgen Bodum to establish an in-house design unit, Pi-Design, in Switzerland. Since 1980, this team of designers, engineers, graphic designers and architects has been responsible for all BODUM® product designs, staying true to the tradition of functionality and quality, with a focus on innovation.

In 1986, Jørgen Bodum turned his attention to the retail market by opening the first BODUM® store in London. This flagship store highlighted the variety of BODUM® products and helped to cement the company's reputation on the international stage. A number of other shops and shop-in-shops followed around the world, including Paris, Copenhagen, Zurich, Lucerne, Tokyo, New York, Sydney, and Auckland.

In 1991, BODUM® purchased Martin S. A., the original producer of the first coffee press maker, MELIOR®. The MELIOR® coffee press was first produced in the 1950s in

the factory of Martin S.A.'s other business, making fine classical clarinets. It went on to become a cult object for drinking coffee in the 1960s, and this design is still present in BODUM®'s current range with the iconic CHAMBORD® coffee press.

However, while the BODUM® name is synonymous with the iconic coffee press, there's much more to us than just coffee.

In 1991, BODUM® also reinvented tea brewing with our innovative ASSAM teapot, developed for the British Tea Council. The ASSAM tea press uses the same brewing system as the French coffee press, giving tea lovers full control over the tea-steeping process for the perfect brew.

The following year, BODUM® also introduced its collection of electrical household goods, e-BODUM®. Simple yet effective, the IBIS water kettle was the first in the collection, which now includes juicers, coffee grinders, mixers, and blenders.

Today, the BODUM® range has expanded further to include other kitchen and household products, including cookware and cutlery, storage items, textiles, and other home and office products.

What is good design?

This question requires that someone does indeed know, and dares to define what good design is and show examples. The problem for the designer and producer would then be how to approach the concept of “good design” with his products.

At BODUM's design studio we are not trying to fulfill this concept of good design, instead we want to give from our perspective of a living and contradictory world, where Mickey Mouse is as important as the collected work of Picasso, where the question what is genuine and false, attractive and ugly, harmonious and discordant, right and wrong, cannot be answered clearly.

In design the simplest things are always the hardest to achieve. A lot of thought goes into finding the best functionality, the best shape, and the best materials. What takes the most thought however, is discovering what can be left out; how we can make our products even simpler and easier – thus enhancing their sophistication.

Tondela's factory

Since the birth of BODUM Portuguesa, environment has been a driving force and a major concern in our activity. During almost 30 years of production, BODUM Portuguesa assumed a responsible position towards the surrounding environment but also to the internal working conditions and safety and well-being of the team.

BODUM® Portuguesa has set a short-term environmental objective of reducing CO2 emissions. To achieve this goal, we've turned to the most innovative green technologies available – photovoltaic panels and energy storage batteries – with the aim of being entirely self-sufficient in the near future. Production sustainability, environmental responsibility, and concern for the wellbeing, safety and working conditions of our workers are all key to BODUM® Portuguesa's objectives. Tondela will be fully running on renewable energy by the end of 2021.

By having production processes that are heavily focused in transforming metal and applying surface treatments to metals, a lot of “environment unfriendly” unitary processes are used and required such as stamping or welding, but the most concerning are those connected to the plating line and degreasing processes. These production processes consume natural resources and BODUM works tirelessly to minimize the impacts in:

- Emission of greenhouse gases;
- Emission of other pollutant air streams;
- Emission of pollutants in water;
- Emission of pollutants in soils;
- Risk of industrial accidents;
- Team safety, health and well-being.

This was done by adopting the best available techniques (BAT) as preventive at the source of the pollution emission:

- Training to team in operating, control and contain processes;
- Reducing the number or quantity of hazardous and dangerous materials;
- Equipment and process good-keeping by internal maintenance procedures;
- Optimization of operational conditions and control of processes;
- Reduction of re-processing needs;
- Project and built processes and facilities prevent and contain pollution in its source;
- Good storage of materials to prevent accidents with environmental impact;
- Good storage of materials and production parts to prevent its deterioration;
- Installing containment tanks and isolated floors in risk areas;
- Saving energy in power sources and make the processes energy efficient;
- Introduction of thermal isolation in the whole building and process tank walls to avoid heat loss;
- Isolation of equipment to avoid the noise propagation.

Saving water

- Recycling water – only 20% of our total consumption is fresh water;
- Consumption control by introducing automatic valves and volume controllers;

- Reducing drag-outs and introduce cascade rinsing between processes;
- Extend the liquid baths life and processes to prevent the treatment need by using filtration, evaporation, ionic exchange techniques;

Because it is impossible to contain all pollutant in its sources, BODUM Portuguesa has installed end processes to treat, reduce or eliminate the pollution charge in its effluents and wastes. On these, we can highlight:

Waste Water Treatment Plant

- All liquid effluents are separated according to their characteristics and treated as in batches;
- All pre-treatments and final treatments are permanently monitored until the admissible values of discharge are achieved;
- The discharge of BODUM lines are connected to a municipal waste water treatment plant that complements the final treatment;
- The sludge generated in the water treatment are de-watered by using recycled air of the pressed air equipments.

Waste Classification and Separation

- All wastes generated in the plant are submitted to a proper separation, classification, handling and storage until there are sent to the destination;
- All waste management is outsourced to licensed entities, meaning the proper destination has as priority the recyclability of the wastes. Only two of the wastes generated at BODUM must be eliminated because the recycling limitations in the market.

Air Aspiration System

- The air aspiration system is connected to all the pollution sources avoiding the pollutants spread inside the plant;
- These systems filter the air before its release to the atmosphere;

In 2008, BODUM Portuguesa had its recognition for all the efforts made and processes developed and implemented during the last decades, by having the Environmental Permit¹ issued by the Portuguese Environment Ministry.

1. The permit is mandatory and directly comes from the EC Directive 2008/1/EC of January 15 (IPPC). According to this permit, BODUM must have a permanent monitoring of the environmental indicators and values so; it is the guarantee of the legislation fulfilling, good practices and procedures.

Aveiro's factory

In 2018 we opened a new factory in Aveiro which is one hour drive from our main factory in Tondela - the place where we started our own BODUM production in 1988. In Aveiro we will focus mainly on producing durable plastic products for our outdoor, wine and drinkglasses as well as all our colourful tea and coffee makers.

We believe that the days of single-use plastics are gone. Whether it is to-go cups, one-way plastic or coffee capsules. We are now moving to sustainability. Our factory in Aveiro has been equipped with the newest, fully automatic machines and the most modern tooling technology.

Production sustainability, environmental responsibility, and concern for the wellbeing, safety and working conditions of our workers are all key to BODUM® 's objectives.

Aveiro's factory

Viabre brew

The renowned natural historian Sir David Attenborough recently brought the importance of living more sustainably sharply into focus when his documentary series Blue Planet II was shown in the US, UK and elsewhere.

Viewers were shocked to see plastic rubbish polluting the Earth's waters and endangering the extraordinary creatures that call them home. As the programme pointed out, there may be more plastic in the oceans than fish by 2050, unless people everywhere take steps to reduce environmental damage.

The planet is incredibly precious but increasingly being put under pressure due to plastic pollution and other vast, man-made problems. Attenborough's well-known passion for protecting not only the oceans but every part of the natural world strikes a chord with us at Bodum®. Treating the environment with respect and helping you to develop a more eco-friendly lifestyle is at the heart of everything we do. Make taste, not waste – that's our motto, and it defines our approach to the way we live and work.

Sustainability (that is, looking after the planet's resources, using them wisely and living in harmony with the environment) has surely never been more important than it is now. The scale of today's environmental issues may seem overwhelming. However, any positive changes individuals make to their daily lives can, when considered collectively, make a huge difference.

No capsules, No paper filters

When you want to pursue a greener way of life, your starting point could be as simple as adopting a sustainable brewing method when you make a cup of joe. Coffee is the world's favourite drink, with around two billion cups being consumed each day, according to the British Coffee Association. Imagine how much waste would be avoided if every serving was made sustainably, i.e. without single-use items such as coffee capsules or paper filters.

Coffee capsules or pods are often made of a mixture of materials (typically, plastic and aluminium, topped with foil or paper) which means they can't be processed at standard recycling plants. Billions end up at landfill sites each year, where they may take anything up to half a century to break down. The capsules have therefore earned a reputation for being 'an environmental menace', as BBC News explains.

Paper filters are also linked to environmental problems. As they rob coffee of many of its natural oils, which get trapped in the fibres, they can't easily be used to make recycled paper. What's more, the sustainable lifestyles blog Dôt advises against composting any filters that have been bleached with the chemical chlorine during the manufacturing process, as they may upset gardens' delicate ecosystems.

Greener alternative

What about when you want a fantastic cup of coffee on the go? That's where Bodum® Travel Presses and Travel Mugs come in. They're a reliable, reusable alternative to the takeaway cups available from many coffee shops and cafés.

Research-led news resource The Conversation has highlighted the fact that 2.5 billion disposable cups, used for coffee and other drinks, are thrown away annually in the UK alone. Sadly, single-use cups litter urban and rural areas around the world. Even when disposed of properly, they raise environmental concerns. Many paper cups are lined with plastic in an attempt to prevent leaks, and this mixture of materials makes them incredibly difficult to process. As a result, only about 0.1% of disposable drinkware is recycled.

As well as being more sustainable than takeaway cups, our travel presses and mugs make coffee, tea and other beverages more enjoyable. They're designed to keep drinks at the optimum temperature for longer, while their sleeves make them more comfortable to carry. Use a travel press or mug instead of throwaway drinkware and you can say goodbye to other disposable items too, from single-use coffee stirrers to carry trays, further reducing waste.

Simple, sustainable slow coffee

As Jørgen Bodum, our CEO and son of our founder, emphasises: 'Good coffee beans, a glass beaker, a steel filter, and freshly boiled water is all that is needed to brew the world's best cup of coffee, and that is how it has always been.' Any disposable add-ons are extraneous. Alongside slow coffee, sustainability has always been of central importance to Bodum®. When we launched our first French press, the award-winning Bistro, in the 1970s, it was selected as the most environmentally friendly coffee press by the international media.

All of our coffee makers are designed to enable you to brew delicious, reinvigorating slow coffee in a sustainable way. You might like to start your slow coffee adventure with a wonderfully simple yet stylish French press, pour over or coffee dripper. If you favour a more theatrical brewing experience, our eye-catching, easy-to-use vacuum/siphon coffee makers are bound to capture your attention. Then why not branch out into cold brew coffee for refreshing iced drinks? Whichever Bodum® coffee maker you choose, you can rest assured that you'll never need disposable capsules or

filters again. So you can save money while helping to save the planet. What's more, by using freshly ground coffee instead of the contents of a capsule, and an integrated, reusable filter instead of a paper version, you'll preserve more of the beans' natural oils for a more rounded flavour.

It's worth pointing out that despite its name, slow coffee doesn't take long to make at all, so it's perfect even when you're busy. You'll be enjoying a cup in minutes!

Try a loose leaf tea

If asked what tea bags are made of, most tea drinkers would probably say paper. However, the vast majority also contain single-use plastic, which is intended to seal the bags and stop them falling apart in hot water.

That's unsettling news when you want to live more sustainably. As the green lifestyles blog Moral Fibres laments, the presence of disposable plastic means the tea bags aren't completely biodegradable. Some tea bags are sold in single-use plastic packaging too, compounding the problem. Another issue is that, like paper filters for coffee, tea bags are often chemically bleached.

To enable you to enjoy the purest taste and eliminate non-biodegradable tea bag waste, we've designed beautiful tea presses and pots for any kind of loose leaf tea. The permanent, integrated filters let the leaves swirl freely while preventing them from ending up in your cup. So you'll enjoy sustainably brewed, smooth, hot or iced tea that's bursting with flavour.

Further boost your green credentials

Our commitment to sustainability doesn't stop there – below are great examples of other ways we can help you to boost your green credentials while enjoying each day more.

Our Bistro Electric Kettle features a measuring guide to help you use exactly the right amount of water and boils with energy-saving efficiency.

The Bodum® Nero Tea and Coffee Coats, as well as our Thermo Jugs and double wall drinkware, keep hot drinks hot for longer without needing extra heat. So you can make the most of each pot you brew and decrease your energy usage.

Our Mocca Vacuum Coffee Maker's distinctive design is enhanced by a handle made of sustainable cork, one of our signature materials. Plus, it'll reduce your electricity consumption, thanks to its gas burner.

Sustainable bamboo is another key material in our collection. The Assam Tea Press' bamboo handle protects your fingers as well as the environment.

The Way Forward

Earlier this year, Sir David Attenborough reached the age of 94 – and he certainly has reason to celebrate. 53% of US and UK adults surveyed by GlobalWebIndex, a market research company, have used less plastic since Blue Planet II was broadcast.

Also encouraging is the United Nations' series of sustainable development goals for all countries to work towards by 2030. The goals include ensuring that production and consumption patterns are sustainable, helping to protect people and the planet.

Clearly, sustainable rather than single-use options are the way forward, and we'll continue doing everything we can to help you pursue a more environmentally friendly lifestyle.

Coffee

BODUM was founded in 1944 by Peter Bodum. Launching a new business during the war wasn't easy as jobs were scarce, but my father sensed it was time to venture out on his own. He was incredibly fortunate to be granted an import license, and by the late 1940s he had achieved great success.

The company's first vacuum/siphon coffee maker, MOCCA, was introduced in the early fifties, but it wasn't until 1958 with the production of the Santos vacuum/siphon coffee maker that BODUM® became a household name for quality coffee products, and coffee has been the major product group for BODUM ever since.

In the 1970s we introduced the now iconic French Press, which continues to be BODUM's most popular item. Today, the majority of BODUM® coffee makers are produced at our factory in Portugal where producing the highest quality products as well as environmental responsibility and safe working conditions are of the utmost importance.

— Jørgen Bodum

Coffeehouse Style Drinks

Espresso

An espresso is about 1 to 1.5oz of espresso coffee. It fills about 1/4 to 3/4 of a demitasse. Espresso is made in an espresso machine by quickly forcing steam and boiling water through finely ground coffee.

Americano

Americano is a style of coffee that is prepared by adding hot water to black coffee which result in a similar strength to traditional drip.

Cappuccino

In Italy cappuccino is served in a 6oz cup. The coffee is topped by a dense froth (half foam, half steamed milk) in a ratio of 3:1. Usually the drink is dusted with unsweetened cocoa.

Macchiato

The coffee is slowly poured into an 8oz glass filled with hot, frothed milk. The coffee "stains" the milk and creates a darker layer over the milk. Then it all gets topped off with pure white foam, a three-layer drink.

Caffé Mocha

Caffé mocha has been served in Italian-American cafes since the 1950s. It's a combination of equal amounts of coffee, hot chocolate and hot frothed milk. For the ultimate sinners it is topped off with whipped cream.

Caffé Latte

Latte is made with coffee and steamed milk in a ratio of 5:1. The coffee is topped with steamed milk then finished with steamed milk foam.

French Press

The French Press Coffee Maker is the simplest of all brewing systems, where coarsely ground beans meet hot water right off the boil.

The right temperature (92–96°C, 195–205°F) brings the optimal extraction power for the essential oils in the beans to develop their full flavor profile in just four minutes. An easy press on the plunger locks the grinds at the bottom of the glass carafe and stops the brewing process.

Note: For the French Press brewing method, BODUM recommends a coarse grind.

Download
Instruction manual

Pour Over

The pour over brew method features a fine mesh stainless steel filter that eliminates need for paper filters.

Paper filters actually absorb the coffee's essential oils hence robbing coffee of true flavor, plus no paper filter means no waste!

Note: For the pour over brewing method, BODUM recommends a filter coarse grind.

Download
Instruction manual

Vacuum

The vacuum/siphon brew method has fascinated generations of coffee drinkers with its theatrical technique.

Water heats in the lower chamber, creating vapor pressure that forces the boiling water up to mix with coffee grounds. The coffee maker is then removed from the heat and vacuum/siphon pressure draws the brewed coffee downward through a strainer, and into the bottom chamber for serving.

Note: For the PEBO® vacuum/siphon brewing method, BODUM recommends a filter coarse grind.

Download
Instruction manual

Cold Brew

Quality cold brewed coffee can be made using essentially the same steps. Instead of hot water, add filtered water at room temperature and stir.

Place the lid on the carafe and let brew for 12 -24 hours at room temperature or in your refrigerator. Press and enjoy!

Note: For the French Press brewing method, BODUM recommends a coarse grind.

Download
Instruction manual

Parts of The French Press Coffee Maker

Plunger – The bar of the plunger is made of stainless steel. After the 4 minutes recommended brewing time, you simply depress the plunger with the tip of your finger. The knob is made of heat-resistant plastic.

Safety Lid – BODUM®’s safety lid prevents the splashing of liquids. Line the safety lid so that it is in the closed position in line with the pour spout. After the brewing has stopped, turn the safety lid back and enjoy your coffee!

Glass beaker – French press coffee makers feature a durable borosilicate beaker. Borosilicate glass is an outstanding material: It is ultra-light and strong, has great heat resistant properties, and will not get cloudy in the dishwasher.

Plastic beaker – Sustainable rather than single-use options are the way forward, and we’ll continue doing everything we can to help you pursue a more environmentally friendly lifestyle.

Metal frame – The original CHAMBORD® Coffee Maker features a frame made of chrome-plated, durable stainless steel that protects the glass beaker from cracks and scratches, as well as protecting surfaces from heat damage.

 **Spiral plate** – The spiral plate keeps the filter mesh in place and makes sure that water goes through but no ground coffee. The flexible spiral provides a universal fit taking into account the manufacturing tolerances of glass jugs.

 **Mesh** – The filter mesh is a key component to the BODUM® Coffee Makers. It separates the ground coffee beans from the water after the brewing has stopped.

 **Cross plate** – The cross plate holds the mesh in place together with the spiral plate.

Handle – The plastic handle provides heat-resistance and durability. In other words, it keeps your fingers from getting burnt.

CHAMBORD®

Coffee Makers

CHAMBORD® is a true original. The iconic design, now synonymous with the BODUM® name, dates back to the 1950s. To this day we continue to produce the CHAMBORD® with the same artisan craftsmanship of yesteryear, but with a focus on environmentally responsible manufacturing in our BODUM owned factory in Portugal. The French Press system continues to be a greener way to brew coffee with the truest flavor possible.

COLUMBIA

Coffee Makers

The BODUM® COLUMBIA Coffee Makers are made of double wall stainless steel which means that your coffee stays hot much longer. The air in between the two walls provides a highly effective layer of insulation. The COLUMBIA is not just any nice looking coffee pot: It is a coffee press. After all, you would not want to compromise taste for beauty. And it works just like any of our coffee presses.

PEBO®

Coffee Makers

The vacuum brewing method has long been known to deliver an abundance of taste through sheer simplicity and pure materials like borosilicate glass. Its exceptionally effective vacuum brewing method extracts all precious oils of your favorite coffee. The vacuum brewing process is entirely sealed off so no aroma can escape. In addition, the brewing time and temperature are perfectly calibrated, ensuring a perfect cup of coffee with each brew.

POUR OVER

Coffee Makers

The POUR OVER promises excellent, rich taste and robust aroma while maintaining the natural oils of the ground coffee. For the perfect cup of coffee, simply fill the cone-shaped filter with freshly ground coffee and pour a small amount of heated water over them until soaked. Slowly pour the remaining hot water into the filter. Coffee will drip into the mouth-blown, borosilicate glass carafe and, in 3-4 minutes, will be ready to serve. Remove the filter from the carafe before serving and enjoy!

Travel Presses

Enjoy a single-serving of French press coffee or loose leaf tea on the go with the TRAVEL PRESS Coffee Maker. Brew and drink or use in the place of a traditional 3 cup French Press. Add 3–4 tablespoons coarse ground coffee, preferred milk and sweetener, and hot water to the mug. Stir contents, replace lid with plunger up, and go. After 4 minutes press down the plunger and enjoy! The stainless steel double wall design with a vacuum seal maintains heat for hours while remaining cool to the touch.

Tea

No wonder tea has been the most popular drink after water for centuries; black teas, white teas, green teas, herbal teas, fruit teas, rooibos teas, the options for pleasure and delight are simply limitless.

We have the right tea maker for all of your tea preferences, including iced tea. Tea brewing doesn't get any purer than with the BODUM® Tea Presses. With this unique system your tea is brewed precisely to your desired strength and aroma. We developed the Tea Press in collaboration with the English Tea Council over 30 years ago and we've been perfecting it ever since. BODUM® Tea Presses are made of the highest quality borosilicate glass, a material that doesn't stain and is absolutely neutral in taste. The glass allows you to observe the brewing process and stop it when it's exactly right. It's just fascinating to see all the beautiful tea colors come to life. The BODUM® Tea Presses are as much a pleasure for your eyes as they are for your taste buds.

Varieties of tea

Green Tea

The freshly plucked leaves of the tea plant *camellia sinensis* must be heated directly after harvest, to prevent the leaves from oxidization and becoming black tea. Traditionally heating in iron pans in China, the Japanese have developed a hot water steam heating to prevent the tea from burning. Both methods create a distinct flavour for each region, that can vary from light, floral, sweet to full bodied and slightly toasted.

70-80 °C
158-175 °F
1-2 min

White Tea

Coming from the same plant as green or black tea, white tea is the one with the least human effect during production. Only the youngest and most fragile buds are harvested by hand and left to dry under the sun. No oxidization or heating is done to preserve the full natural character of the white tea. The name derives from the fuzzy white appearance of the young tea leaves.

70-80 °C
158-175 °F
4-6 min

Fruit Tea

Commonly used in Europe, dried fruit pieces and other parts of suitable plants have been brewed with hot water into fruit tea – or tisane – for thousands of years. The basic fruit tea consists of apple, orange, hibiscus and rosehip and is given a special twist with whatever exotic fruits and ingredients is added to it. Fruit teas are naturally caffeine free and make the perfect iced teas for children!

90-96 °C
195-205 °F
5-6 min

Black Tea

One of the most known varieties of tea is black tea. It is made from the teaplant *camellia sinensis/assamica* and amongst the most popular in Europe and North America. After harvest, the tea leaves are allowed to oxidize to the fullest, so that the freshly plucked leaves slowly turn brownish and darker. The flavour is usually stronger, than other types of tea, but can also vary from light and floral himalayan first flush to strong and malty assam teas.

90-96 °C
195-205 °F
2-3 min

Rooibos Tea

Only a very limited area in the Cedar mountains, in the heart of South Africa is capable of providing the right soil and climate to grow rooibos. Being used for centuries by the local people, the rooibos cultivation and processign started only a few hundred years ago. Now the bush is treated nearly the same way, as it has been for decades. The bush is allowed to ferment after harvest, giving the tea it's disctinative sweet and red cup.

90-96 °C
195-205 °F
5-6 min

Tea Press

The Tea Press utilizes the same brewing system as the French Press to allow for full control of the tea steeping process.

Once your preferred coloring and strength is reached, you simply press down the plunger and seal the tea leaves into the bottom part of the filter that has no holes. This makes the brewing process stop with one easy push and you can discard or re-use the tea leaves after you have enjoyed your beverage. Silicone rim secures filter firmly into the teapot and stays cool to the touch for safe removal.

Note: All loose leaf teas are suitable for the BODUM® Tea Press. The Tea Press works best with fruit teas and black tea because it interrupts the brewing process – avoiding bitterness.

Teapot

Tea leaves can be left to swirl freely in the infuser to develop their full flavor, and can be left to brew without interruption.

The filter, along with the tea leaves, can be removed at any time to stop the brewing process and can even be used a second time to re-infuse quality loose leaf tea. The highest quality green tea, for example, can be reused up to four times. The CHAMBORD® Teapot comes with a wide filter basket in the borosilicate glass bowl which lets the tea leaves swirl freely and gives them the space they need to live up to their full aroma potential.

CHAMBORD®

Teapots

The CHAMBORD® Teapot comes with a wide filter basket in the borosilicate glass bowl which lets the tea leaves swirl freely and gives them the space they need to live up to their full aroma potential. Whether you prefer black or green teas – the CHAMBORD® serves them all perfectly; giving them the stage they deserve and displaying their unique coloring beautifully.

BODUM® COLUMBIA pairs utility with timeless elegance. Highly polished stainless steel and classic design make this the perfect choice for entertaining and gifting. The French Press brewing system allows for full control over the tea steeping process. The silicone gasket locks the tea leaves into bottom of the filter once brewing is complete, cutting off access of water to the tea leaves. This allows tea to be used multiple times.

ASSAM

Tea Presses

The ASSAM Tea Press is the icon among the wide variety of BODUM® Tea Presses. Its classic round shape and borosilicate glass let all teas shine in their best light. Contrary to non-transparent pots, the glass pot allows the distinct color palates to be viewed as they are a big part of any tea lover's delight. There is also a very practical reason for making glass the preferred staging ground for your teas: You have precise control over the extraction and strength of the tea as the color's intensity indicates how far along in the brewing process.

Drinkware

BODUM premiered its line of double wall glasses in 2004. The inventive design coupled with timeliness style made these glasses an instant classic. Over the past years the collection has earned numerous awards and expanded to include a variety of styles and sizes.

Made of heat-resistant borosilicate glass and individually mouth-blown by expert artisans, the double wall construction creates a highly effective layer of insulation. Hot drinks stay hot longer while the glass remains cool to the touch, and cold drinks stay cold without producing messy condensation. The result is endless serving possibilities. The patent pending hydrophobic silicone vent at the bottom of each glass equalizes pressure within the walls of the glass with the outside air pressure. The glass will self-adjust to any temperature liquid, and the vent is only permeable to air, not water, so whether your beverage is hot or cold it will never allow fluids into the interior of the glass layers.

The BODUM® Double Wall Glasses have won the following awards:

Double Wall Glasses that Breathe!

A silicone vent at the base of each of BODUM®'s Double Wall Glasses equalizes the air pressure between the two layers of glass when either hot or cold liquids are added. Permeable only to air, never water, the vent enhances durability and will never allow liquids to enter between the two layers.

Every double wall glass is mouth-blown by expert artisans, and therefore each may have slight differences in height, thickness, and weight. To preserve the longevity of the glass, please adhere to the following precautions:

Kitchen

Our kitchens have become the central hub of our living quarters – almost like the farm kitchens in Denmark used to be.

They're the place where everything happens, where everybody meets, where discussions are held and beans are spilled. The kitchen is no longer a cordoned off place that feeds what's going on in the living room. Today's kitchen is the living room, it's where everybody ends up anyway. And that's a good thing – we want them to see the whole range of beautiful BODUM® products at work after all.

Storage

In the kitchen there are a lot of small and big things that need to be sorted and stored. The easiest and most efficient way to manage that is with storage jars, designed to help you organize or even preserve your favourite food items with ease. Our practical storage jar collection is sure to complement any home environment in style and it offers colour and harmony to brighten your day. They have plastic or cork lids which are airtight so your food should last longer. With our clean and simple look you can mix and match the different sizes, or together with other jars from Bodum create your personal touch on the kitchen shelf.

Discover the broad selection of elegantly designed porcelain and complete your home's repertoire of sophisticated dinnerware. You'll find single pieces that are easy to mix and match as well as complete porcelain dining sets that will give your table a new look.

Each piece's smooth, elegant form and considered functionality can be simply appreciated. Stage your breakfast with an opulently decorated breakfast table or enjoy a delicious gazpacho from our well-proportioned soup plates or arrange a wonderful meal on the individual pasta or gourmet plates. A clean, white plate can become a canvas for either inspired culinary artistry or perfectly ordinary weekday meals. After all, there is beauty in the mundane. And imagine picking up the same plate years later and seeing, reflected in the smooth, white surface all the good meals and good times enjoyed. No limits are set to the imagination when it comes to this large range of choice and our series combinability.

DOURO

Porcelain

The Douro Valley in Portugal is one of Europe's oldest and most beautiful wine regions. With the curved terraces of vines as far as the eye reaches, it has been the inspiration for the fine grooves in BODUM's new porcelain set DOURO. An elegant classic design that both black as white can stand alone. But which, in all its simplicity, can be mixed with other porcelain sets, make a soft contrast to glass and steel, or emphasize warm materials like cork and wood.

BLÅ

Porcelain

It is simple. A tiny blue decoration.
But one that parted the waters,
democratized the good life, and
painted a new picture of women
in particular. It was made in a
creative process that pushed the
boundaries of conventional design
and gave birth to a new, radical,
minimal expression in one poetic
stroke. It is the dinnerware Blå.
Designed by Grethe Meyer in 1965.

Outdoor

BODUM® has an array of BPA-free plastic products that are perfect for outdoor and poolside service. Introducing our new collection of outdoor tumblers made from an extremely durable plastic.

The way further:

- All product produced by BODUM Plásticos can be recycled and many of them are in fact made from recycled materials.
- Our Travel Mugs, Double Wall Glasses and Cold Brew come out of the mould as one piece saving resources and energy.
- With the help of solar panels and a windmill BODUM Plásticos will run only on green energy by the end of 2020.
- Producing durable products rather than single-use options is the way forward, and we'll continue doing everything we can to pursue a more environmentally friendly lifestyle.

PAVINA® OUTDOOR

Tumblers

PAVINA® OUTDOOR is a crystal clear lightweight double wall tumbler designed for the outdoors. Ideal for everyday use and functional for large outdoor barbeques. We have recently invented a new technique for the production of our double wall tumblers by using durable plastic. The tumblers are produced in one whole piece - no welding and no possibility of leaking - and even better than that, it is all done in a sustainable way.

Cork

BODUM has a new design line with cork. One of nature's most beautiful and functional materials. Cork comes from the bark of cork oak which is a miracle in itself. Every 9 years you can harvest all the trees bark so that it is completely naked without damage. The trees generate can grow up to 200-300 years old.

Cork oak grows in the Mediterranean region, not least in Portugal which supplies about half of all the cork that is used in the world. We know the cork from wine bottles plugs, but because cork has so many good qualities it also moved into the home. Cork is thermal insulation, water and air-tight, elastic, light and soundproofing. It is also beautiful to look at and smooth to touch. Cork is a 100% natural and sustainable material and we have almost all the cork trees we need growing just outside our windows. All BODUM products are produced namely in our own factory in Portugal, where environmental responsibility already has our highest priority.

From breakfast in bed to cocktails on the terrace – serving meals, drinks and snacks has never been more stylish, thanks to this high-quality cork tray. Made of cork, which is renowned for its beauty and sustainability, the tray adds a touch of elegance to any occasion while being wonderfully impermeable and elastic. Chic details make it comfortable to hold and easy to carry from room to room, upstairs or into the garden.

POUR OVER

Coffee Makers

The POUR OVER promises excellent, rich taste and robust aroma while maintaining the natural oils of the ground coffee. For the perfect cup of coffee, simply fill the cone-shaped filter with freshly ground coffee and pour a small amount of heated water over them until soaked. Slowly pour the remaining hot water into the filter. Coffee will drip into the mouth-blown, borosilicate glass carafe and, in 3-4 minutes, will be ready to serve. Remove the filter from the carafe before serving and enjoy!

The delightful MELIOR® Glögg decanter pays tribute to our Danish heritage (we've designed it with Denmark's wonderfully warming mulled wine in mind) and also enhances your enjoyment of the festive season. Wrapped snugly around the top of the carafe, the smooth cork sleeve ensures that no matter how hot you like your Glögg and other drinks, the decanter won't be too hot to handle.

'Melior' is the Latin word for 'better', which is highly appropriate, given that our aim with this finely crafted water infuser and wine decanter is to give you a better way to serve water or wine in your home or outdoors. The borosilicate glass carafe will never alter the taste of your chosen drink, while the natural cork stopper and base help to protect the liquid and keep the carafe stable.

BISTRO

Burr Coffee Grinder

Grinder crushes beans between stainless steel conical burrs rather than slicing them which preserves bean's intrinsic flavor and aroma.

10903-70-1

- This space-saving grinder holds an amazing 220gr of coffee and therefore allows for larger quantities in one go.
- 12 settings allow you to grind from a coarse French Press to a fine espresso with the ability to micro-adjust between settings.
- Programmable time function for even easier handling.
- The wide open funnel prevents spilling of the beans.
- Tightly fitting plastic lid keeps the grounds from spilling.
- Equipped with a friction clutch, preventing damage to the grinding gear by the presence of small stones.

Measurements: 120 × 156 × 275mm
Material: Plastic, rubber, silicone, borosilicate glass, stainless steel
Rating Europe: 160 W, 220-240 V, 50-60 Hz
Rounds per minute (r/min): 720+/-15%

BISTRO

Programmable Coffee maker

The Programmable Coffee Maker sets new standards in coffee making: Excellent, full-bodied taste without capsules or paper filters!

11754-01 1.5 l, 51 oz

- Glass Carafe with an easy to grip, non-slip handle.
- Includes a permanent stainless steel coffee filter.
- Stain resistant heating plate keeps coffee warm for up to 30 minutes.
- Easy to read back-lit LED display.
- Programmable up to 24 hours in advance for convenience.

☒ No paper filter! ☒ No capsule!

Capacity: 1.5 l, 51 oz

Measurements: 281 × 180 × 367mm

Material: Plastic, silicone, glass, stainless steel, galvanized steel, nickel plated steel

Rating Europe: 900 W, 220-240 V, 50-60 Hz

ePEBO

Vacuum/Siphon Coffee Maker

The ePEBO vacuum/siphon coffee maker is the modern version of PEBO, and has been part of the Bodum range long ago.

- 1. 11744-01 8 cup, 1.0 l, 34 oz
- 2. 11744-01-01LED 8 cup, 1.0 l, 34 oz

- This brewing method extracts all precious oils of your favorite coffee, delivering an exceptional cup of coffee.
- Funnel made of borosilicate glass, users can view the brewing process from start to finish.
- The coffee maker is removed from the heat and vacuum pressure draws the brewed coffee downward through a strainer, and into the bottom chamber for serving.
- Stain resistant heating plate keeps coffee warm for up to 30 minutes.
- The brewing time and temperature are perfectly calibrated, ensuring a perfect cup of coffee with each brew.

⊠ No paper filter! ⊠ No capsule!
Capacity: 1.0 l, 34 oz
Measurements: 200 × 232 × 364mm
Material: plastic, stainless steel, borosilicate glass, rubber, silicone

MOCCA

Beam Heater

A powerful 430-watt halogen lamp and precise dial control will allow you to tune your heat for a perfect vacuum/siphon brew.

11918-16US

- The beam heater is specially designed for heating vacuum/siphon coffee makers more safely.
- Generates a more consistent heating resource over alcohol lamp or butane burner.
- Good insulation, corrosion resistance, abrasion resistance, heat resistance.
- Switch the heater off after four minutes, and the brewed coffee passes through a filter and back into the globe. The result is a well-rounded brew with the toastiness of French press, minus the grit.
- After brewing, the heater can also be used to keep the coffee warm above its seductive glow.

Measurements: 250 × 205 × 165mm
Material: rubber, plastic, glass stainless steel
Rating US: 430 W, 120 V, 60 Hz

Instruction manual

MOCCA

Vacuum/Siphon Coffee Maker

The Mocca vacuum/siphon Coffee Maker was BODUM's very first product, introduced by Peter Bodum in 1956.

1. 11862-109 8 cup, 1.0 l, 34 oz
2. 11863-109 4 cup, 0.5 l, 17 oz

- Vacuum brew method delivers balanced and flavorful cup of coffee.
- Funnel and lower chamber made of heat resistant borosilicate glass, users can view the brewing process from start to finish.
- Stainless steel handle with an easy to grip, non-slip handle made of cork.
- Vacuum/siphon brewed coffee produces cleaner, richer, and smoother cup of coffee by maximizing the essential oils from the brew.
- Borosilicate glass chambers and the stainless steel handle are easy to clean.

No paper filter! No capsule!

Capacity 1.0 l, 34 oz – 0.5 l, 17 oz

Measurements
1. 200 × 140 × 400mm
2. 190 × 130 × 370mm

Material: cork, stainless steel, glass, rubber, plastic, metal
